# **1 Introduction**

The city of Jacksonville, Florida was designated by the United States Environmental Protection Agency (EPA) as an Environmental Justice Showcase Community. One of the concerns of the community is whether or not the fish and shellfish are safe to eat from Hogan Creek and Long Branch, two popular fishing streams in downtown Jacksonville. EPA's Science and Ecosystem Support Division (SESD) coordinated efforts to address this concern expressed by the urban core community and the City of Jacksonville, by collecting fish from these waterbodies for tissue contaminant analysis.

## **2 Methods**

### **2.1 Site Description**

Long Branch and Hogan Creek are waterbodies of concern located within the Lower St. Johns River watershed, in the urban core of the City of Jacksonville, Duval County, Florida (Figure 1). The area surrounding these streams is highly urbanized with residential, commercial and light industrial facilities. Both Hogan Creek and Long Branch are listed as impaired for fecal coliform (FDEP 2006, PBS&J 2010).

### **2.2 Study Design and Sampling Methods**

Sampling reach selections were based on accessibility and proximity to popular fishing locations by local anglers along Hogan Creek and Long Branch. Because of limited access along portions of each waterbody, only one reach was sampled in each of the two streams and representative fish samples were collected from each stream. Collection sites are shown in Appendix A: Figure 1. *In situ* water quality parameters (USEPA 2007d) and Global Positioning System coordinates (GPS) (USEPA 2007c) were collected along with fishes (USEPA 2007b). GPS coordinates of sample sites are listed in Table 1. Additionally, photographs were taken at the beginning and end (downstream and upstream) of each sample reach (Appendix C).

Fish were collected from each stream using a tote barge electrofisher (USEPA 2007b). Fish species selected for chemical analysis were based on the most abundant species present at the time of sample collection. Fish were placed directly into a clean livewell with ambient water throughout sample collection. Fish were segregated by species and total lengths were measured. Samples were grouped by size class, bagged accordingly, and placed on wet ice immediately. Samples were taken to a laboratory at the Duval County Health Department where whole fish were weighed, filleted, and fillets weighed. Fish samples were composited (minimum of 3 individuals) by species. The species composites were based on distinct size classes available. Size classes contained individuals of similar size so that the smallest individual was no less than 75 percent of the total length of the largest individual (USEPA 2000). Samples were then wrapped in foil, labeled and frozen. Samples were delivered to the processing laboratory (SESD), where they were homogenized using a high speed blender with pelletized dry ice (USEPA 2007e).

Collection of shellfish (blue crab) was attempted using crab traps baited with carcasses of fish collected from the waterbody being sampled. Crab pots were set out for 24 hours in Hogan Creek and Long Branch. Site locations are shown in Appendix A: Figure 1. No shellfish were captured for this study.

Quality control samples associated with tissue processing included dry ice, equipment and water blanks. Three samples were analyzed for each quality control type. Quality control samples were collected by placing dry ice into 8 ounce, pre-cleaned glass jars for the dry ice blank. Dry ice was placed in a blender, pulverized and transferred to 8 ounce pre-cleaned glass jars for the equipment blank. One liter, pre-cleaned glass bottles were filled directly from the MilliQ® system, used for decontamination of processing equipment (USEPA 2007a), for the water blank.

Table 1

Station	Description	Latitude	Longitude
Hogan	beginning of reach (fish)	30.33361	-81.65382
Hogan	end of reach (fish)	30.33410	-81.65553
Long	beginning of reach (fish)	30.36404	-81.64987
Long	end of reach (fish)	30.36366	-81.65096
Hogan	crab pot 1	30.32817	-81.64765
Hogan	crab pot 2	30.33410	-81.65553
Long	crab pot 1	30.37172	-81.63968
Long	crab pot 2	30.36371	-81.65087

### 3 Results/Discussion

#### 3.1 In Situ Water Quality

*In situ* water quality data are listed in Table 4. Water quality parameters included dissolved oxygen, specific conductance, salinity, pH, and temperature. These parameters were used to assess the water quality conditions at the time of sampling. All parameters are considered to be within normal ranges. Specific conductance in Hogan Creek is elevated due to the increase in salinity caused by the tidal change.

Table 4

Station	Temperature	Specific Conductance	Dissolved Oxygen	pH	Salinity
	°C	µS/cm	mg/L	S.U.	ppt
Hogan	8.65	1930	7.39	7.07	0.96
Long	11.92	342	6.46	6.96	0.21

#### 3.2 Fish Tissue

Three different fish species were collected for tissue analysis during the sampling effort. Based on electrofishing capture rate, Hogan Creek contained a large population of largemouth bass and striped mullet, whereas Long Branch contained a large population of largemouth bass and blue tilapia. These species were selected as the target species for analysis based on their feeding habits, which included

one bottom-dweller species and one top predator species. The number of fish collected was based upon the amount of tissue required to perform chemical analysis. Sample information is listed in Appendix B: Table 2 for Hogan Creek and Appendix B: Table 3 for Long Branch.

A total of eight composite tissue samples were analyzed for Hogan Creek and eight were analyzed for Long Branch. Samples were analyzed for organochlorine pesticides, total PCBs, mercury, lead, arsenic, selenium and cadmium. In addition, Hogan Creek samples were analyzed for dioxin/furans and poly-aromatic hydrocarbons (PAHs).

All tissue analytical results were compared to Florida's Department of Health (FDOH) screening values (SV) for recreational fishermen. Screening value results for Hogan Creek are presented in Appendix B: Table 5. All samples of top predator (largemouth bass) and bottom-dweller (striped mullet) for Hogan Creek exceeded SVs for dieldrin, total PCBs, PAHs for total benzo(a)pyrene equivalence, and dioxins. Additionally, all bottom-dweller samples exceeded SVs for technical chlordane, heptachlor epoxide, and inorganic arsenic. Top predator sample H-LMB3 exceeded the SV value for technical chlordane and sample H-LMB1 exceeded the SV for heptachlor epoxide.

Screening value results for Long Branch are presented in Appendix B: Table 6. All samples of top predator (largemouth bass) and bottom-dweller (blue tilapia) for Long Branch exceeded SVs for dieldrin and heptachlor epoxide. Additionally, all top predator samples exceeded the SV for technical chlordane.

### **3.3 Quality Control**

No contamination was detected in the water system blanks QAMQB and QAMQB-0111. Lead was detected in the dry ice blank (QADIB) but was not detected in the equipment blank (QABB2). The dry ice used for the blanks came from the same batch. It is assumed the detection of lead is from a source other than dry ice, such as laboratory contamination, since only the dry ice blank and one other sample had a detection of lead. The level of detection was low in the blank therefore did not have an impact on tissue samples. Dioxin was detected in samples QADIB and QABB2. These detects had no impact on screening results of tissue samples since the level of detection was well below the dioxin SV and no tissue samples exceeded the dioxin SV.

## **4 Conclusion**

In order to provide a context for assessing the results they were compared to FDOH fish SVs. Florida's Department of Health will provide additional data analysis and review to evaluate potential human health effects.

**SUBJECT:** FINAL Analytical Report

Project: 11-0178, Environmental Justice Jacksonville

Surface Water Protection

**FROM:** Jeffrey Hendel

Quality Assurance Section Chemist

**THRU:** Marilyn Maycock, Chief

Quality Assurance Section

**TO:** Jerry Ackerman

Attached are the final results for the analytical groups listed below. These analyses were performed in accordance with the associated contract Statement Of Work (SOW). In general, project data quality objectives have not been used to evaluate these data prior to release by the Quality Assurance Section. For a listing of specific data qualifiers and explanations, please refer to the Data Qualifier Definitions included in this report.

Analyses Included in this report:

Method Used:

**Dioxin (DIO)**

Dioxin

**Report Narrative** for Work Order C111501, Project: 11-0178

Site Name: Environmental Justice Jacksonville, Jacksonville, FL

ELEMENT Sample Nos. C111501-01 through C111501-10

Dioxin Analysis: Cape Fear Analytical, LLC, Wilmington, NC

The ESAT Work Team reviewed data for the project cited above consisting of eight tissue samples and two dry ice blanks, which were all analyzed per statement of work DLM02.2 for dioxins and furans. The samples were collected between 12/14/10 and 12/20/10, and received by the laboratory on 03/11/11. The final data package was received by the USEPA Quality Assurance Section, Region 4 SESD/MTSB on 04/01/11. A Stage 4 validation consisting of a manual review (S4VM) was performed on the dioxin samples submitted for this case.

Certain results among these data are reported as not detected at an elevated detection limit. In general, this may occur when method blank contamination is evident, or when one or more of the qualitative identification criteria have not been met. In the event of method blank contamination, detection limits may be raised as much as five times the level of contamination in order to discount false positive results. If qualitative identification criteria are not met for an analyte, an estimated maximum possible concentration (EMPC) value is reported, and is qualified as non-detect ("U" flag).

The method reporting limit (MRL), as defined elsewhere in this document, is used in dioxin/furan analyses to report the analyte concentration which corresponds to the lowest quantitative point on the calibration curve. Any positive results less than this value are qualified as estimates ("J" flag). The value reported for a 2,3,7,8-substituted PCDD/PCDF analyte that is not detected is either an estimated detection limit (EDL), which is calculated from the instrument signal vs. system noise, or an EMPC value as described above, qualified with a "U" flag.

Toxic equivalent quantities (TEQ) have been reported for these data which have been derived from the most recently available set of toxic equivalent factors (TEF). For mammalian TEQs, these factors were published in 2005 by the World Health Organization (WHO). In the case of the TEQs for birds and fish, the factors were published in 1998, also by WHO.

Toxic equivalent values for non-detect results are determined using the EDL or the EMPC as a proxy value. Thus a sample with non-detect results for all PCDD/PCDF congeners will still have a positive TEQ value. The TEQ is qualified as estimated ("J") when the sum of the contributions from the various PCDD/PCDF analytes that are themselves reported as either estimated ("J") or non-detect ("U") exceeds 10% of the TEQ total. If no positive results are present for any of the 2,3,7,8 congeners, the TEQ is reported as not detected with an estimated detection limit ("UJ").

Low recovery of the labeled 2,3,7,8-TCDF standard was observed in the opening continuing calibration standard (TCDFCS3) analyzed on 03/29/11 using the DB-225 column. The confirmed result for 2,3,7,8-TCDF in sample C111501-10 was "J" qualified (QC-3).

## DATA QUALIFIER DEFINITIONS

U	The analyte was not detected at or above the reporting limit.
CLP01	Concentration reported is less than the lowest standard on calibration curve
CLP10	2,3,7,8-TCDF confirmed by second column.
CLP18	Estimated Maximum Possible Concentration (EMPC) Reported
CLP24	Result has not been confirmed by second column analysis.
D-5	Estimated quantitation for one or more individual constituents comprising >10% of the total.
J	The identification of the analyte is acceptable; the reported value is an estimate.
Q-3	Instrument not calibrated for all constituents of the total concentration result.
QC-3	Analyte calibration criteria not met

## ACRONYMS AND ABBREVIATIONS

CAS	Chemical Abstracts Service  Note: Analytes with no known CAS identifiers have been assigned codes beginning with "E", the EPA ID as assigned by the EPA Substance Registry System ( <a href="http://www.epa.gov/srs">www.epa.gov/srs</a> ), or beginning with "R4-", a unique identifier assigned by the EPA Region 4 laboratory.
MDL	Method Detection Limit - The minimum concentration of a substance (an analyte) that can be measured and reported with a 99% confidence that the analyte concentration is greater than zero.
MRL	Minimum Reporting Limit - Analyte concentration that corresponds to the lowest demonstrated level of acceptable quantitation. The MRL is sample-specific and accounts for preparation weights and volumes, dilutions, and moisture content of soil/sediments.
TIC	Tentatively Identified Compound - An analyte identified based on a match with the instrument software's mass spectral library. A calibration standard has not been analyzed to confirm the compound's identification or the estimated concentration reported.

**MEMORANDUM**

**SUBJECT:** FINAL Analytical Report

Project: 11-0109, Environmental Justice Jacksonville

Surface Water Protection

**FROM:** Jeannie Williamson

OCS Chemist

**THRU:** Sallie Hale, Chief

ASB Organic Chemistry Section

**TO:** Jerry Ackerman

Attached are the final results for the analytical groups listed below. These analyses were performed in accordance with the Analytical Support Branch's (ASB) Laboratory Operations and Quality Assurance Manual (ASB LOQAM) found at [www.epa.gov/region4/secd/asbsop](http://www.epa.gov/region4/secd/asbsop). Any unique project data quality objectives specified in writing by the data requestor have also been incorporated into the data unless otherwise noted in the Report Narrative. Chemistry data have been verified based on the ASB LOQAM specifications and may have been qualified if the applicable quality control criteria were not met. For a listing of specific data qualifiers and explanations, please refer to the Data Qualifier Definitions included in this report. The reported results are representative only of the samples as received by the laboratory.

**Report Narrative** for Work Order E105301, Project: 11-0109

**Sample Disposal Policy**

Because of the laboratory's limited space for long term sample storage, our policy is to dispose of samples on a periodic schedule. Please note that within 60 days of this memo, the original samples and all sample extracts and/or sample digestates will be disposed of in accordance with applicable regulations. The 60-day sample disposal policy does not apply to criminal samples which are held until the laboratory is notified by the criminal investigators that case development and litigation are complete.

These samples may be held in the laboratory's custody for a longer period of time if you have a special project need. If you wish for the laboratory to hold samples beyond the 60-day period, please contact our Sample Control Coordinator, Debbie Colquitt, by e-mail at [Colquitt.Debbie@epa.gov](mailto:Colquitt.Debbie@epa.gov), and provide a reason for holding samples beyond 60 days

## UNITED STATES ENVIRONMENTAL PROTECTION AGENCY

Region 4 Science and Ecosystem Support Division

980 College Station Road, Athens, Georgia 30605-2700

D.A.R.T. Id: 11-0109

Project: 11-0109, Environmental Justice Jacksonville - Reported by Jeannie Williamson

## DATA QUALIFIER DEFINITIONS

U	The analyte was not detected at or above the reporting limit.
B-2	Reporting level elevated due to trace amounts of analyte present in the method blank.
CR	Due to interferences, analyte concentration is over highest standard.
CRA	T. Chlordane result is an estimate. Constituents metabolized or degraded in sample, resulting in an altered pattern.
D-4	MRL elevated due to interferences.
H-8	Recommended analytical holding time exceeded
J	The identification of the analyte is acceptable; the reported value is an estimate.
Q-4	Greater than 40 % difference between primary and confirmatory GC columns
QM-1	Matrix Spike Recovery less than method control limits
QR-1	MRL verification recovery less than lower control limits.
OS-3	Surrogate recovery is lower than established control limits.

## ACRONYMS AND ABBREVIATIONS

CAS	Chemical Abstracts Service  Note: Analytes with no known CAS identifiers have been assigned codes beginning with "E", the EPA ID as assigned by the EPA Substance Registry System ( <a href="http://www.epa.gov/srs">www.epa.gov/srs</a> ), or beginning with "R4-", a unique identifier assigned by the EPA Region 4 laboratory.
MDL	Method Detection Limit - The minimum concentration of a substance (an analyte) that can be measured and reported with a 99% confidence that the analyte concentration is greater than zero.
MRL	Minimum Reporting Limit - Analyte concentration that corresponds to the lowest demonstrated level of acceptable quantitation. The MRL is sample-specific and accounts for preparation weights and volumes, dilutions, and moisture content of soil/sediments.
TIC	Tentatively Identified Compound - An analyte identified based on a match with the instrument software's mass spectral library. A calibration standard has not been analyzed to confirm the compound's identification or the estimated concentration reported.

**4SESD-ASB**

**MEMORANDUM**

**SUBJECT:** FINAL Analytical Report

Project: 11-0109, Environmental Justice Jacksonville

Surface Water Protection

**FROM:** Janet Muse

OCS Chemist

**THRU:** Sallie Hale, Chief

ASB Organic Chemistry Section

**TO:** Jerry Ackerman

Attached are the final results for the analytical groups listed below. These analyses were performed in accordance with the Analytical Support Branch's (ASB) Laboratory Operations and Quality Assurance Manual (ASB LOQAM) found at [www.epa.gov/region4/sestd/asbsop](http://www.epa.gov/region4/sestd/asbsop). Any unique project data quality objectives specified in writing by the data requestor have also been incorporated into the data unless otherwise noted in the Report Narrative. Chemistry data have been verified based on the ASB LOQAM specifications and may have been qualified if the applicable quality control criteria were not met. For a listing of specific data qualifiers and explanations, please refer to the Data Qualifier Definitions included in this report. The reported results are representative only of the samples as received by the laboratory.

Analyses Included in this report:

Method Used:

**Report Narrative** for Work Order E105301, Project: 11-0109

**Sample Disposal Policy**

Because of the laboratory's limited space for long term sample storage, our policy is to dispose of samples on a periodic schedule. Please note that within 60 days of this memo, the original samples and all sample extracts and/or sample digestates will be disposed of in accordance with applicable regulations. The 60-day sample disposal policy does not apply to criminal samples which are held until the laboratory is notified by the criminal investigators that case development and litigation are complete.

These samples may be held in the laboratory's custody for a longer period of time if you have a special project need. If you wish for the laboratory to hold samples beyond the 60-day period, please contact our Sample Control Coordinator, Debbie Colquitt, by e-mail at [Colquitt.Debbie@epa.gov](mailto:Colquitt.Debbie@epa.gov), and provide a reason for holding samples beyond 60 days

## DATA QUALIFIER DEFINITIONS

U The analyte was not detected at or above the reporting limit.

CR Spectral match is good, however, compound is outside retention time criteria,

J The identification of the analyte is acceptable; the reported value is an estimate.

QL-1 Laboratory Control Spike Recovery less than method control limits

## ACRONYMS AND ABBREVIATIONS

CAS Chemical Abstracts Service

Note: Analytes with no known CAS identifiers have been assigned codes beginning with "E", the EPA ID as assigned by the EPA Substance Registry System ([www.epa.gov/srs](http://www.epa.gov/srs)), or beginning with "R4-", a unique identifier assigned by the EPA Region 4 laboratory.

MDL Method Detection Limit - The minimum concentration of a substance (an analyte) that can be measured and reported with a 99% confidence that the analyte concentration is greater than zero.

MRL Minimum Reporting Limit - Analyte concentration that corresponds to the lowest demonstrated level of acceptable quantitation. The MRL is sample-specific and accounts for preparation weights and volumes, dilutions, and moisture content of soil/sediments.

TIC Tentatively Identified Compound - An analyte identified based on a match with the instrument software's mass spectral library. A calibration standard has not been analyzed to confirm the compound's identification or the estimated concentration reported.

**February 7, 2011**

**4SESD-ASB**

**MEMORANDUM**

**SUBJECT:** FINAL Analytical Report

Project: 11-0109, Environmental Justice Jacksonville

Surface Water Protection

**FROM:** Terri White

ASB Inorganic Chemistry Section, Acting Chief

**THRU:** Jenny Scifres, Acting Chief

Analytical Support Branch

**TO:** Jerry Ackerman

Attached are the final results for the analytical groups listed below. These analyses were performed in accordance with the Analytical Support Branch's (ASB) Laboratory Operations and Quality Assurance Manual (ASB LOQAM) found at [www.epa.gov/region4/secd/asbsop](http://www.epa.gov/region4/secd/asbsop). Any unique project data quality objectives specified in writing by the data requestor have also been incorporated into the data unless otherwise noted in the Report Narrative. Chemistry data have been verified based on the ASB LOQAM specifications and may have been qualified if the applicable quality control criteria were not met. For a listing of specific data qualifiers and explanations, please refer to the Data Qualifier Definitions included in this report. The reported results are representative only of the samples as received by the laboratory.

Analyses Included in this report:

Method Used:

**Total Metals (TMTL)**

Total Mercury	EPA 245.1
Total Mercury	EPA 7473
Total Metals	EPA 200.8

**Report Narrative** for Work Order E105301, Project: 11-0109

**Sample Disposal Policy**

Because of the laboratory's limited space for long term sample storage, our policy is to dispose of samples on a periodic schedule. Please note that within 60 days of this memo, the original samples and all sample extracts and/or sample digestates will be disposed of in accordance with applicable regulations. The 60-day sample disposal policy does not apply to criminal samples which are held until the laboratory is notified by the criminal investigators that case development and litigation are complete.

These samples may be held in the laboratory's custody for a longer period of time if you have a special project need. If you wish for the laboratory to hold samples beyond the 60-day period, please contact our Sample Control Coordinator, Debbie Colquitt, by e-mail at [Colquitt.Debbie@epa.gov](mailto:Colquitt.Debbie@epa.gov), and provide a reason for holding samples beyond 60 days

## DATA QUALIFIER DEFINITIONS

U

The analyte was not detected at or above the reporting limit.

## ACRONYMS AND ABBREVIATIONS

CAS Chemical Abstracts Service

Note: Analytes with no known CAS identifiers have been assigned codes beginning with "E", the EPA ID as assigned by the EPA Substance Registry System ([www.epa.gov/srs](http://www.epa.gov/srs)), or beginning with "R4-", a unique identifier assigned by the EPA Region 4 laboratory.

MDL Method Detection Limit - The minimum concentration of a substance (an analyte) that can be measured and reported with a 99% confidence that the analyte concentration is greater than zero.

MRL Minimum Reporting Limit - Analyte concentration that corresponds to the lowest demonstrated level of acceptable quantitation. The MRL is sample-specific and accounts for preparation weights and volumes, dilutions, and moisture content of soil/sediments.

TIC Tentatively Identified Compound - An analyte identified based on a match with the instrument software's mass spectral library. A calibration standard has not been analyzed to confirm the compound's identification or the estimated concentration reported.

**April 5, 2011**

**4SESD-ASB**

**MEMORANDUM**

**SUBJECT:** FINAL Analytical Report

Project: 11-0109, Environmental Justice Jacksonville

Surface Water Protection

**FROM:** Jeannie Williamson

OCS Chemist

**THRU:** Sallie Hale, Chief

ASB Organic Chemistry Section

**TO:** Jerry Ackerman

Attached are the final results for the analytical groups listed below. These analyses were performed in accordance with the Analytical Support Branch's (ASB) Laboratory Operations and Quality Assurance Manual (ASB LOQAM) found at [www.epa.gov/region4/secd/asbsop](http://www.epa.gov/region4/secd/asbsop). Any unique project data quality objectives specified in writing by the data requestor have also been incorporated into the data unless otherwise noted in the Report Narrative. Chemistry data have been verified based on the ASB LOQAM specifications and may have been qualified if the applicable quality control criteria were not met. For a listing of specific data qualifiers and explanations, please refer to the Data Qualifier Definitions included in this report. The reported results are representative only of the samples as received by the laboratory.

---

Analyses Included in this report:

Method Used:

**Organochlorine Pesticides (OCP)**

Organochlorine pesticides

EPA 8081

**Sample Disposal Policy**

Because of the laboratory's limited space for long term sample storage, our policy is to dispose of samples on a periodic schedule. Please note that within 60 days of this memo, the original samples and all sample extracts and/or sample digestates will be disposed of in accordance with applicable regulations. The 60-day sample disposal policy does not apply to criminal samples which are held until the laboratory is notified by the criminal investigators that case development and litigation are complete.

These samples may be held in the laboratory's custody for a longer period of time if you have a special project need. If you wish for the laboratory to hold samples beyond the 60-day period, please contact our Sample Control Coordinator, Debbie Colquitt, by e-mail at [Colquitt.Debbie@epa.gov](mailto:Colquitt.Debbie@epa.gov), and provide a reason for holding samples beyond 60 days

### DATA QUALIFIER DEFINITIONS

U

The analyte was not detected at or above the reporting limit.

### ACRONYMS AND ABBREVIATIONS

CAS Chemical Abstracts Service

Note: Analytes with no known CAS identifiers have been assigned codes beginning with "E", the EPA ID as assigned by the EPA Substance Registry System ([www.epa.gov/srs](http://www.epa.gov/srs)), or beginning with "R4-", a unique identifier assigned by the EPA Region 4 laboratory.

MDL Method Detection Limit - The minimum concentration of a substance (an analyte) that can be measured and reported with a 99% confidence that the analyte concentration is greater than zero.

MRL Minimum Reporting Limit - Analyte concentration that corresponds to the lowest demonstrated level of acceptable quantitation. The MRL is sample-specific and accounts for preparation weights and volumes, dilutions, and moisture content of soil/sediments.

TIC Tentatively Identified Compound - An analyte identified based on a match with the instrument software's mass spectral library. A calibration standard has not been analyzed to confirm the compound's identification or the estimated concentration reported.
